

MIRA LABS

High Level Product and Technical Roadmap

NORTH-STAR OUTCOMES

AUM Portability:

Move legacy, underperforming accounts into programmable, tokenized mandates with Anchorage custody.

Auditability with Discretion:

Continuous on-chain verifiability while keeping client identity & trade secrets private.

Strategy Velocity:

Launch, scale, and iterate quant strategies (incl. Lidya HFT) like a product factory.

Unit Economics:

Bend OPEX downward via automation (subs/redemptions, reporting, compliance, rebalancing)

24-Month Timeline (high-level)

- Q4 '25–Q1 '26: Phase 1 POC live; Plume/Nest issuance + Securitize KYC; first subs/redemptions; investor portal v0.
- Q1–Q2 '26: Privacy attestations; zero-PII on-chain; external review.
- Q2–Q4 '26: Quant Studio; 3–5 strategies; Lidya expansion path.
- Q3 '26–Q1 '27: SMA allocator; tax lots; client portal v1.
- Q1–Q3 '27: In-house tokenization v1; migrate one live product.
- Q2–Q4 '27: AI rebalancer phased rollout; guardrails → partial autonomy.

Budget Summary ((capex-heavy build; excludes AUM-based custody fees)

- Phase 1: \$0.30–0.54M
- Phase 2: \$0.31–0.57M
- Phase 3: \$0.55–0.97M
- Phase 4: \$0.34–0.58M
- Phase 5: \$0.65–1.16M
- Phase 6: \$0.30–0.54M
- Security/Compliance/Infra (2 years): \$0.74–1.34M
- Two-year total: \$3.19–5.70M**

Budget levers: audit scope (single vs dual), partner reliance (extend Phase 5), scope of SMA tax logic, breadth of strategy adapters, and how quickly we push autonomy in the AI rebalancer.

Tangible Unlocks:

- Credible POC regulators, auditors, and LPs can inspect on-chain.
- Reusable rails (subs/redemptions/NAV/oracles) for every new product line.
- Strategy velocity with a path to SMA scale and eventually in-house issuance.
- Defensible IP around privacy attestations, allocator/rebalancer logic, and tokenization.

High Level Product and Technical Roadmap

PHASE I

POC Rythm Capital $\rightleftharpoons$ Lidya RWA Token (Q4 2025–Q1 2026)

Objective:

A live, end-to-end path from Rythm client accounts at Anchorage into the tokenized Lidya SPV and back (subs/redemptions), with verifiable on-chain records.

Initial Architecture:

Custody:

Anchorage segregated client accounts; allow-listed program wallets.

Tokenization:

Permissioned RWA share token for the Lidya SPV issued via Plume (Nest platform); Securitize provides KYC/AML onboarding and transfer-restriction/issuer services (final role split can be Plume=issuance + Securitize=KYC/TA).

Funds Flow:

Subscriptions initiated from Anchorage-controlled addresses $\rightarrow$ mint RWA shares; redemptions burn $\rightarrow$ return cash to the same controlled addresses.

NAV/Reporting:

Daily NAV oracle (signed), on-chain lifecycle events (+ off-chain statements) mapped to lot-level histories.

Deliverables:

- Smart contracts (permissioned token + subscription/redemption module).
- Integrations: Anchorage (accounts, whitelists, webhooks), Plume/Nest (issuance, transfer controls), Securitize (KYC/AML, investor registry).
- NAV publisher + basic investor portal (positions, tx hashes, statements).

Gating Criteria:

- First successful subscription & redemption recorded on-chain with Anchorage-originating tx hashes.
- $\geq$ \$5–\$15M test AUM processed end-to-end.
- **Reconciliation:** on-chain state matches Anchorage statements for T+0/T+1.

KPIs:

- Time-to-fund (legacy $\rightarrow$ tokenized): $\leq$ 3 business days initial; target same-day.
- Ops touches per sub/redemption: $\leq$ 2 manual steps; target 0.
- Error rate in reconciliation: 0 critical / month.

Budget (One-Time + first 6 months):

- Engineering & product: \$180–300k
- External audits (smart contracts/integration): \$80–150k
- Vendor/platform fees (custody/tokenization/ops): \$40–90k
- Phase total: \$300–540k**

Key Risks & Mitigations:

- Custody policy approvals $\rightarrow$ pre-clear flows with Anchorage; run UAT in sandbox.
- Legal/tax wrapper for SPV token $\rightarrow$ outside counsel engagement in parallel.
- Dual-vendor coordination (Plume/Securitize) $\rightarrow$ single “issuer of record” designation + integration runbook.

MIRA LABS

High Level Product and Technical Roadmap

PHASE II

Privacy Layer (Q1–Q2 2026)

Objective:

Make holdings & compliance verifiable without exposing PII or strategy internals.

Scope:

Identity:

Off-chain KYC registry; on-chain allowlist (pseudonymous) with revocation.

Compliance Proofs:

ZK circuits to attest “KYC/AML-cleared” & jurisdiction class without revealing identity.

Data Minimization:

No PII on-chain; encrypt off-chain statements & logs; access via signed, expiring links.

Strategy Privacy (Selective):

Aggregate performance & NAV proofs; no per-trade leakage.

Deliverables:

- ZK proof service (API + circuit repo) for investor eligibility & subscription checks.
- Viewing-key model for admins/auditors; access logging.
- Data classification & retention policy (legal reviewed).

KPIs:

- 0 PII written on-chain.
- Compliance attestations verifiable on-chain within < 2s.
- External privacy review passed.

Budget:

- Cryptography/BE engineering + audits: \$250–450k
- Legal/privacy review & infra: \$60–120k

Phase total: \$310–570k

Key Risks:

- Circuit complexity → start with lightweight attestations; upgrade to richer proofs.

MIRA LABS

High Level Product and Technical Roadmap

PHASE III

Strategy Portfolio Scaling (Q2–Q4 2026)

Objective:

Factory-style launchpad for strategies (vaults), including Lidya HFT expansions.

Scope:

Vault Factory:

Strategy wrappers with fee modules, gates, drawdown rails.

Execution Fabric:

Adapters to CEX/DEX venues; broker pipeline for Lidya's Turkish execution (pre-approved accounts, settlement rails, and periodic cash sweeps from Anchorage).

Risk & Reporting:

Real-time exposure, slippage, latency, and NAV publisher; performance-fee crystallization.

Deliverables:

- Strategy catalog (market-neutral, basis, delta-neutral, trend, Lidya HFT variants).
- Trade allocator, position service, PnL/NAV oracle, fee distribution.
- Ops runbooks (failover, market halts, venue outages).

KPIs:

- Time-to-launch new strategy: ≤ 4 weeks $\rightarrow$ target 2 weeks.
- Slippage vs benchmark: -30% improvement vs manual.
- Strategies live: 5–10 by EOY 2026; TVL milestone: \$50–\$100M.

Budget:

- Core platform eng + quant integration: \$350–600k
- Market data, infra, venue connectivity: \$120–220k
- Security reviews (adapters, oracles): \$80–150k

Phase total: \$550–970k

Key Risks:

- CEX counterparty & FX/transfer controls $\rightarrow$ pre-arranged corridors, weekly sweep cadence, dual controls.

MIRA LABS

High Level Product and Technical Roadmap

PHASE IV

SMA Orchestration (Q3 2026–Q1 2027)

Objective:

True SMA at scale: model portfolios, constraints, tax-aware rebalancing, per-client audit.

Scope:

Model Engine:

Strategy “models” applied across many Anchorage accounts, with client-level exclusions.

Allocator:

Block orders → pro-rata fills → allocations back to each client account.

Compliance Guardrails:

Suitability, concentration, restricted lists, trade pre-checks.

Client Portal:

Positions, realized/unrealized, cost basis, downloadable statements.

Deliverables:

- SMA scheduler & allocator, policy engine, Anchorage API expansion (bulk ops).
- Tax-lot accounting module; drift-based rebalancing.

KPIs:

- Tracking error vs model: ≤ 50 bps/month.
- Rebalance cost per account: ↓ 40–60% vs manual.
- SLA: rebalance cycles complete in < 60 min for 1k accounts.

Budget:

- Platform & FE eng: \$250–420k
- Tax-lot/portfolio math + QA: \$90–160k

Phase total: \$340–580k

Key Risks:

- Reconciliation edge cases → property-based tests + shadow accounting for first 3 months.

MIRA LABS

High Level Product and Technical Roadmap

PHASE V

In-House Tokenization Stack (Q1-Q3 2027)

Objective:

Reduce vendor reliance; own the IP for permissioned assets, cap tables, corp actions, compliance plugins.

Scope:

Standards:

Permissioned token, transfer controls, force-transfer/emergency pause, allowlists, corp actions (splits, dividends), series/feeder support.

Registrar/TA:

On-chain/off-chain register, investor lifecycle, audit reports.

Admin UI:

Issuer console for new lines, KYC reviews, corp actions, cap table export.

Deliverables:

- Protocol v1 (contracts + indexer + admin UI), migration runbook from initial partner stack (Plume/Securitize).
- Audits & certs.

KPIs:

- Time to issue new line: ≤ 1 day.
- Gas/ops cost per lifecycle event: $\downarrow \geq 40\%$ vs vendor.
- Zero-downtime migration for at least one live product.

Budget:

- Protocol/backend/frontend: \$500–900k
- Audits & compliance certification: \$150–260k
- Phase total: \$650–1,160k**

Key Risks:

- Regulatory deltas across jurisdictions → abstraction layer for rulesets; consult per roll-out.

MIRA LABS

High Level Product and Technical Roadmap

PHASE VI

AI Rebalancing (Q2-Q4 2027)

Objective:

Use ML to propose or execute optimal rebalances under drift, cost, risk, and tax constraints—with guardrails and explainability.

Data and Signals:

Market:

Pyth/Chainlink price feeds; venue order book snapshots; borrow/funding rates.

Portfolio:

Anchorage positions, tax lots, realized/unrealized PnL; vault exposures.

Macro/events:

Calendar feeds; volatility regimes; liquidity metrics.

On-chain:

Vault flows, gas costs, MEV risk estimates.

System:

- Offline backtesting framework; policy gradient or constrained optimizer.
- Online inference with human-in-the-loop approvals at first; graduated autonomy with limits.
- Explainers: per-trade rationale, expected cost savings, risk deltas.

KPIs:

- Tracking error reduction at equal turnover: $\geq 20\%$.
- Effective cost per rebalance (slippage+fees+tax): $\downarrow \geq 15\%$.
- Human overrides: $< 10\%$ after month 3.

Budget (One-Time + first 6 months):

- Data contracts & infra: \$120–220k
- ML eng + MLOps: \$180–320k

Phase total: \$300–540k

Risks:

- Model drift/overfit $\rightarrow$ rolling cross-validation; kill-switches; strict policy limits.

MIRA LABS

High Level Product and Technical Roadmap

CROSS-CUTTING WORKSTREAMS

Continuous

System:

- Security & Audits: Threat modeling, formal verification on critical contracts, key management reviews. **\$150–250k/yr**
- Compliance & Legal: Jurisdictional wrappers (US RIA/Lux vehicles), disclosures, marketing reviews. **\$120–240k/yr**
- SRE/Infra: Observability, on-call, cost tracking, incident runbooks. **\$100–180k/yr**
